

AWAKEN

Maximum N-Pact

AWAKEN® applied to your crop helps increase root development and plant growth.

Maximum N-Pact® is the fuel your plants need to stay healthy and maximise yield potential.

WHAT IS IT AND HOW DOES IT WORK?

AWAKEN® is an early season nutritional foliar spray ideal for improving crop vigour and yield performance. It contains zinc ammonium acetate plus an extensive chelated micro nutritional package for increased photo-pigment concentrations, and photosynthetic activity. The result means greater plant metabolic activity and increased nutrient uptake and plant translocation

Maximum N-Pact® is a mid to late season resin based foliar nutritional nitrogen spray ideal for enhancing crop quality and yield, correcting nitrogen deficiencies and contains GABA (Gamma Amino Butyric Acid) to help plants withstand stressful conditions. The resin based formula means less burn and better leaf absorption.

WHICH CROPS ARE SUITABLE?

Wheat, Barley

Wheat, Barley

WHEN SHOULD I USE IT?

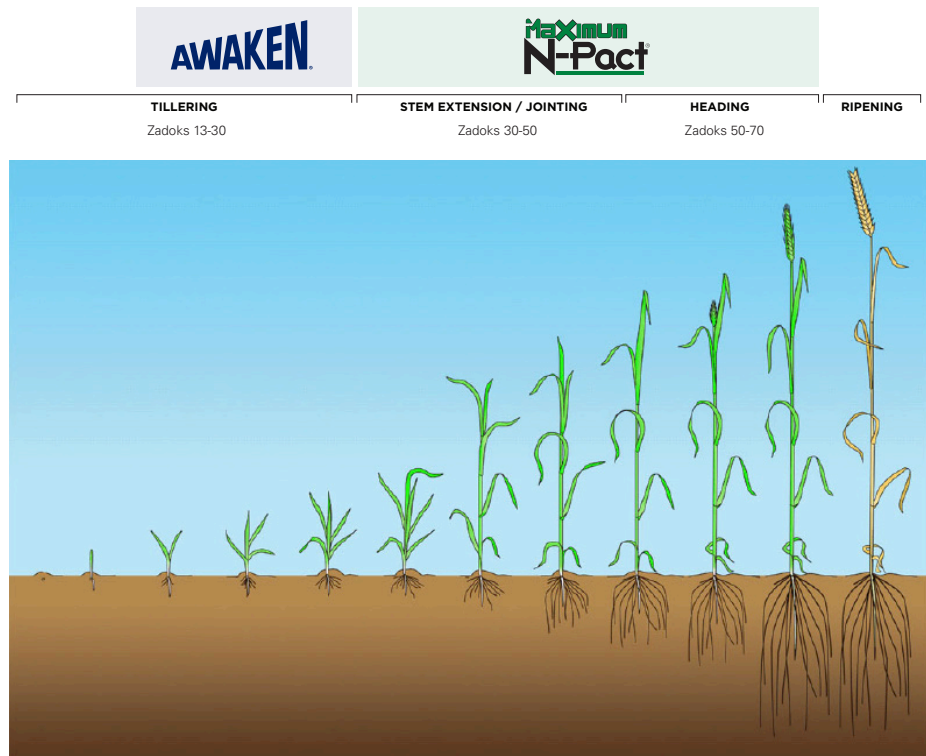

Vegetative stage

Reproductive stage

WHAT ARE THE BENEFITS OF INCORPORATING THESE PRODUCTS INTO MY EXISTING PROGRAM?

- Excellent early season foliar spray
- Enhanced early plant growth and vigour
- Compatible with broad range of post emergent sprays
- Compatible with most post emergent fungicides and herbicides
- Improved recovery from stress & crop damage
- More fibrous and extensive root systems
- Excellent addition to early in-crop sprays

- Excellent mid to late season foliar nitrogen spray
- Compatible with broad range of post emergent sprays
- Increased crop photosynthesis
- Faster response following crop stress
- Excellent crop safety
- Increases drought and salinity tolerance

*Awaken and Maximum N-Pact are also registered for use on other crops, see label for full details.
