Awaken® applied to your crop helps increase root development and plant growth.

Awaken® is an early season nutritional foliar spray ideal for improving crop vigour and yield performance. It contains zinc ammonium acetate plus an extensive chelated micro nutritional package for increased photo-pigment concentrations, and photosynthetic activity.

The result means greater plant metabolic activity and increased nutrient uptake and plant translocation.

Maximum N-Pact® is the fuel your plants need to stay healthy and maximise yield potential.

Maximum N-Pact® is a mid to late season resin based on foliar nutritional nitrogen spray ideal for enhancing crop quality and yield, correcting nitrogen deficiencies and contains GABA (Gamma Amino Butyric Acid) to help plants withstand stressful conditions.

The resin based formula means less burn and better leaf absorption.

What is it and how does it work?

Awaken® is an early season nutritional foliar spray ideal for improving crop vigour and yield performance. It contains zinc ammonium acetate plus an extensive chelated micro nutritional package for increased photo-pigment concentrations, and photosynthetic activity.

The result means greater plant metabolic activity and increased nutrient uptake and plant translocation.

Maximum N-Pact® is a mid to late season resin based on foliar nutritional nitrogen spray ideal for enhancing crop quality and yield, correcting nitrogen deficiencies and contains GABA (Gamma Amino Butyric Acid) to help plants withstand stressful conditions.

The resin based formula means less burn and better leaf absorption.

Which crops are suitable?

Wheat, Barley

What crops are suitable?

Wheat, Barley

When should I use it?

Vegetative stage

Reproductive stage

What are the benefits of incorporating these products into my existing program?

- Excellent early season foliar spray
- Enhanced early plant growth and vigour
- Compatible with broad range of post emergent sprays
- Compatible with most post emergent fungicides and herbicides
- Improved recovery from stress and crop damage
- More fibrous and extensive root system
- Excellent addition to early in-season crop sprays

- Excellent mid to late season foliar nitrogen spray
- Compatible with broad range of post emergent sprays
- Increased crop photosynthesis
- Faster response following crop stress
- Excellent crop safety
- Increases drought and salinity tolerance
